Logic Assignment #5

Go to Google.com

1. Identify the problem
   a. After further review, I have identified the problem to be, How can I readily access a plethora of information from my mobile device.

2. What do I need to know
   a. Translation point - unique HTML server for google.com
   b. Beginning point of data - Having a mobile phone/computer or device that can search the world wide web
   c. Hypothetically, we are collecting data to present to a seniors' course on how to navigate the intricacies of technology.

3. Identify what I need to find
   a. Figure out the exact HTTPS of google to ensure you are on the right webpage
   b. What search engine do we use to display google
   c. Depending on what country your in, you may have to use a different IP address
   d. Determine what device you're using to search google

4. Organize the data - This is what I need to collect
   a. I need to log onto google.com to search for a dinner recipe. I am utilizing my mobile phone to search. I know that I'm in America so the United States version of Google should work. On my mobile phone, the search engine safari is installed; I will use this to search. Lastly, I need to identify the specific https:// that will take me to google.com

5. Find and identify relationships
   a. You need to cook dinner for you and your family but you don't know any recipes, so you want to search online for one. You grab your mobile phone that is sold and used in american territory so everything is visible in a language you understand. The mobile phone you have, has a search engine installed on it already; I will use this to search for google.com. I start typing in the letters

g o o g l e and the search engine displays several results. I click on the first option which directs me to google.com with its own unique https://. Once I am on google, I search for my kitchen recipe

6. Find a solution/Un-do the problem

    a. I need to search for a recipe for dinner. I use google.com but I need to know the unique https:// to access the website, I need to access the website from a search engine, I can find a search engine on my mobile phone, I use my mobile phone from america to open a search.

7. Presentation

So the initial request was to go to google.com. After further review, I realized the actual problem was How can I readily access a plethora of information from my mobile device.

To be able to search the world wide web and have a plethora of information available to you at your finger tips, first you must grab any device that you can search on such as a phone or computer. Once you have a device, it's helpful to know what country your in in case you have to change the address based off your country. After, open your mobile/computer's search engine and type in g o o g l e. From that search, you should see several results pop up with the 1st result being the most relevant website. Click on the 1st website which directs you to google.com. Save the website link to your mobile/computer browser for easy access and begin searching. To end this scenario, I would begin searching my dinner recipe
